

DAY 6

[DAY 06 - Linux Fundamentals:
Read and write Text files]

→ how can I create multiple way directory-

1. mkdir suraj
2. mkdir -p suraj/RS/Man
3. mkdir student{1..10}
4. mkdir -p project/ST, b, D3
5. mkdir -p project/ST, b, D3/Students

if no student 51..103
[how can I delete] (C...)
rm -rf student{1..10}

mkdir student only use for empty directory

rm -rf directory [if any inside another]
[how can create a file and write a
data]

1. touch file.txt

This command use to create a empty file

2. cat file.txt

This command write the data inside the file

→ cat >> file.txt

append the data inside the file.

* if you for again use

cat > file.txt

12. ~~It write the data and data~~

It over-write the data previous data over-write by new data.

3 tail -n 4 notes.txt

-n [Number]

4 [Four lines]

→ This command is use to show the last line of the file.

4. # head -n 4 notes.txt

This command is use to show the first 4 line of the file.

5 tee →

This command read from standard input and write to standard output and file

* # echo "hello" | tee output.txt

- first print the "hello" on the terminal
- second save this hello inside the output.txt.
- a [append mode do not overwriten when you use it]

* cat hols.txt | tee -a output.txt

• wc [word count]

This command is used to show the count lines and characters in a file.

wc file.txt

output

10 50 300 file.txt

• 10 lines

50 words

300 characters.

Common flag

-l [count lines]

-w [word count]

-m [character]

echo "I am learning Linux" | wc -w

PS aya / tee -a process.output | wc -l

word: A word is a group of characters separated by spaces.

• I am learning.

there is 3 word

character: A character is a single letter, number, symbol, or space.

line: A row of text ending with enter.
